

EXPERIENCE

VNBlock

Backend Developer, Blockchain Developer · 20+

Ho Chi Minh, Viet Nam

Jul 2025 - Present

- **Develop applications:** Built token audit services, Anti-MEV execution flows, EVM snipers, and high-performance Rust signal parsers for low-latency trading
- **Blockchain development:** Engineered multi-protocol EVM Smart Contract Routers for DEX aggregation with integrated fee-monetization and slippage protection. Implemented cutting-edge standards including EIP-7702 for Account Abstraction and ERC-8004 for secure, on-chain AI Agent verification

Vgame Studio

Backend Developer, Blockchain Developer ·

Ho Chi Minh, Viet Nam

Apr 2024 - Jun 2025

- **Blockchain research and development:** Develop, unit test, audit and deploy advanced smart contracts on the TON network (funC), EVM (solidity). **Top 3 NFT on Getgems.io with trading volume exceed \$280,000.** Reference
- **Develop applications:** Develop and maintain scalable server-side applications using NestJS and MongoDB. Successfully integrated crypto payment solutions for a project with **onchain stats: 200k+ UAW, generated 3M+ transactions, 1M\$ in revenue.** Reference
- **Devops management:** Optimized and stabilized backend infrastructure to reliably serve over 9M+ users, 100k+ CCU, ensuring high concurrency and cost efficiency. **Reduced cloud infrastructure costs from \$40,000/month to \$7,000/month during peak user activity by implementing advanced DevOps and server optimizations.** Reference

Alpha Networks Solution

Backend Developer, Blockchain Developer ·

Ho Chi Minh, Viet Nam

Oct 2023 - Mar 2024

- **Develop and maintain server-side applications:** Proposed and led the migration from Fastify to NestJS, improving code maintainability and scalability for future growth
- **Design and implementation of low-latency, high-availability, and performant applications:** Implemented comprehensive monitoring and observability using OpenTelemetry, Prometheus, Grafana, and Jaeger, significantly enhancing service reliability and incident response
- **Blockchain research and development:** Develop, unit test and deploy smart contracts on Ton network & EVM. Research new blockchain technologies to apply to projects such as upgradeable contract, funC,...

Codelight

Backend Developer ·

Ho Chi Minh, Viet Nam

Jun 2022 - Sep 2023

- **Develop and maintain server-side applications:** Create and maintain scalable and efficient server-side applications using NodeJS/NestJS and related technologies such as GraphQL, MongoDB, PostgreSQL, Redis...
- **Blockchain Development:** Write and deploy smart contracts on EVM to support Gamefi such as Token, NFT, Marketplace, Deposit/Withdraw, Staking, Gamble...

PROJECTS

MevX (<https://mevx.io/>)

Backend Developer, Blockchain Developer · Team size: 20+

Customer: VNBlock

Jul 2025 - Present

Description: MevX is a high-performance decentralized trading terminal and DEX aggregator on SOL & EVM chains

My responsibilities:

- Developed a customized Smart Contract Router supporting multi-DEX protocols with integrated fee-on-transfer logic for bot revenue monetization.
- Implemented cutting-edge standards including EIP-7702 for temporary Account Abstraction and ERC-8004 for decentralized AI Agent security and verification

- Built token sniper service utilizing real-time Mempool monitoring via gRPC/WebSockets to execute trades at Block-0 with optimized gas strategies
- Developed automated token audit service in NestJS to detect Honeypots, liquidity locks, and malicious contract ownership changes via pre-trade simulation
- Engineered a low-latency signal parser using Rust for SOL

Technologies used: NestJS, Rust, Solidity, Redis, MongoDB

Cat Gold Miner (<https://catgoldminer.ai/>)

Customer: Vgame Studio

Backend Developer, Blockchain Developer · Team size: 20+

Apr 2024 - Present

Description: Cat Gold Miner is a Top Play to Earn Telegram Mini App game with total 9M+ users and won multiple competitions including: Top #1 The Open League Hackathon, Binance MVB 8, listing on Bitger, Gate.io, MEXC,...

My responsibilities:

- Develop, unit test, audit and deploy smart contracts to support custom Jetton token, NFT reverse auction, dynamic NFT, NFT merge tree, airdrop merkle tree using funC language on Ton network.
- Integrating blockchain functionalities into existing systems through APIs, enabling data interaction with ton network through blockchain infrastructures such as tonapi.io, toncenter, dton.io....
- Design and deploy multi-cluster ingress solutions for Google Kubernetes Engine (GKE) clusters across multiple regions, establish CI/CD pipelines using GitLab CI and ArgoCD, utilize Infrastructure as Code (IaC) with Terraform to manage and version control cloud resources

Technologies used: NestJS, MongoDB, Redis, FunC, Solidity

Gaming Hub Platform

Customer: Vgame Studio

Backend Developer, Blockchain Developer · Team size: 10+

Mar 2025 - Present

Description: Gaming Hub is a comprehensive game platform that allows users to play games and earn rewards. The platform supports game developers to post and convert traditional Web2 games to Web3 games, provides intuitive onboarding solutions to help Web2/Web3 users familiarize themselves with blockchain technology, and implements cross-quest mechanisms to share user traffic across multiple games and enhance overall ecosystem engagement.

My responsibilities:

- Develop and maintain scalable server-side applications using NestJS and MongoDB.
- Write, unit test and deploy Solidity/funC smart contracts to support nft marketplace, airdrop, bridge nft cross chain,...
- Implement comprehensive observability solution with real-time system monitoring through OpenTelemetry instrumentation, Prometheus metrics collection, Jaeger distributed tracing, and Grafana dashboards for performance visualization.

Technologies used: NestJS, MongoDB, Redis, FunC, Solidity, GraphQL, Subgraph

EDUCATION

VNUHCM - University Of Science

Ho Chi Minh, Viet Nam

Bachelor of Software Engineering; GPA 3.24/4

Jun 2017 - May 2022

TECHNICAL SKILLS

Backend: NodeJS , NestJS , ExpressJS , GraphQL

Database: PostgreSQL , DynamoDB , MongoDB , Redis

Blockchain: Solidity , Hardhat , FunC , Blueprint

Others: Docker , Kubernetes , GCP , Azure , Git
